

2021-22 Daily Attestation of Health

All caregivers must assess their child's health daily and keep them home if they are exhibiting any signs of illness as detailed below. Likewise, all faculty and staff must assess their own health daily and remain home if they are exhibiting any signs of illness.

Individuals must be able to answer NO to the following:

- Have you had a fever greater than or equal to 100 degrees Fahrenheit in the past 48 hours without fever-reducing medication?
- Are you exhibiting any signs or symptoms of an undiagnosed respiratory illness (cough, runny nose, respiratory secretions)?
- Are you experiencing shortness of breath or difficulty breathing?
- Do you have chills or generalized body aches?
- Have you lost your sense of smell or taste?
- Do you have a new headache (e.g. one not associated with known conditions such as allergies)?
- Do you have a sore throat?
- Have you experienced active vomiting or diarrhea within the last 48 hours?
- Have you experienced an unexplained loss of appetite?
- Do you have a bacterial infection such as pink eye or strep throat that has not yet been treated with antibiotics for a full 24 hours?
- Are you experiencing an undiagnosed rash or new and/or untreated rash or skin condition (e.g. hives or a wound with purulent drainage)?
- Have you been asked to self-isolate or instructed to quarantine by a medical professional or local health department official?
- If you are not fully vaccinated, have you been identified as a close contact of anyone who has been diagnosed with COVID-19? (For these purposes, the CDC defines close contact as having been any within six feet of an infected person for at least 15 minutes).

If an individual develops any key COVID-19 symptoms—fever of 100.4 or more, chills, uncontrolled new cough, shortness of breath, difficulty breathing, loss of taste or smell—**or a combination of secondary symptoms**, the individual should consult with their doctor and seek a COVID-19 test.
